

SECTION-1

1. Guido van rossum.
2. Yes.
3. Lower case.
4. Identation.
5. D.
6. Pip install python.
7. Unlimited length.
8. Error.
9. 0.
10. 56.24
11. A.
12. C.
13. B.
14. Naïve bayes.
15. True.
16. Expectation maximization.
17. Descriptive model.
18. Models that underfit process a high bias.
19. All of the above.
20. KNN constantly evolves.

SECTION-B

1. Types of machine learning:

The machine learning is four main types. that are,

1. supervised-uses labeled data.
2. unsupervised-uses unlabeled data.
3. semi-supervised-uses both labeled and unlabeled data.
4. reinforcement-rewards and penalties.

2. Different between supervised and unsupervised learning:

Supervised learning:

- uses labeled data.
- Output prediction.
- Classification and regression.

Unsupervised learning:

- Uses unlabeled data.
- Find pattern.

- Clustering and association.

4. Classifier:

The classifier based on a training set data sizes are

- Small dataset
- Medium dataset
- Large dataset

5. Building a model:

There are three stages of building a model in machine learning.

- Data prediction.
- Model training.
- Model evaluation and deployment.

6. Deep learning:

Deep learning is the subset of machine learning. It uses with ANN networks with multiple hidden layers to automatically learning component. It require GPU. It is work well with large data set.

SECTION-C

2. Amazon collects the data from user.

Product list, rating, product like, tracking, history

The system analyzes the searching history from the user. Then send the similarity of the products.

It predicts what types of product user most like to buy next.

4. Training set and Test set:

Training set:

- Used to train the machine learning model.
- The model learn the patterns from this data.

Data set:

- Used to evaluate final performance.
- This model never seen in this data.

5. Applications of supervised machine learning:

Speech recognition:

Uses the speech recognition. Incoming voice calls are recorded. Speech recognition convert to the daily spoken words into text. The spam call uses by a fake banking calls and thief the data from the mobiles.
